# AIRLINES RESERVATION SYSTEM

## Acknowledgement

The satisfaction that accompanies the successful completion of any task would be incomplete without the mention of people whose ceaseless cooperation made it possible, whose constant guidance and encouragement crown all efforts with success. We are grateful to our project guide "Mrs. Savitri Ma'am" for the guidance, inspiration and constructive suggestions that helped us in the preparation of this project.

We are also thankful to my colleagues with whom we have fruitful discussions which have helped us a lot in giving a final shape to the program.

## **1. Project Name and Description**

### **AIRLINES RESERVATION SYSTEM**

The Airline Reservations System (ARS) was one of the earliest changes to improve efficiency. ARS eventually evolved into the Computer Reservations System (CRS). A Computer Reservation System is used for the reservations of a particular airline and interfaces with a Global Distribution System (GDS) which supports travel agencies and other distribution channels in making reservations for most major airlines in a single system.

Airline Reservations Systems contain airline schedules, fare tariffs, passenger reservations and ticket records. An airline's direct distribution works within their own reservation system, as well as pushing out information to the GDS. A second type of direct distribution channel are consumers who use the internet or mobile applications to make their own reservations.

### **INVENTORY MANAGEMENT**

An airline's inventory contains all flights with their available seats. The inventory of an airline is generally divided into service classes (e.g. First, Business or Economy class) and up to 26 booking classes, for which different prices and booking conditions apply. Inventory data is imported and maintained through a Schedule Distribution System over standardized interfaces. One of the core functions of the inventory management is the inventory control. Inventory control steers how many seats are available in the different booking classes, by opening and closing individual booking classes for sale. In combination with the fares and booking conditions stored in the Fare Quote System the price for each sold seat is determined.

## ACKNOWLEDGEMENT

Our heartfelt thanks to our project guide, **Prof. Savitri Mane** who depleted their time in guiding us in our project. Under their proficient guidance, we could overcome all the complexities during the development of the project. Their enthusiastic advice and constant encouragement with an affectionate attitude have inspired us a lot to conclude our project work successfully.

Our special thanks to **Dr. Ganesh Bhosale**, Principal of **SNBP College**, **Prof. Sunanda Phadtare** (H.O.D of Commerce), who guided us through the intricacies of the project, fruitful discussions and their encouraging words of advice which helped boost our morals.

Last but not the least; we are thankful to our family and friends who directly and indirectly helped us in the completion of this project.

Date: 23/05/23

Amaan Patil

&

Shishir Kumar

## **CHAPTER-4 CONCLUSION**

This project has really been faithful and informative. It has made us learn and understand the many trivial concepts of Python Language.

As we have used python Tkinter as a GUI it provides various controls, such as buttons, labels and text boxes to build a user friendly application.

The fast growing use of internet confirms the good future and scope of the proposed project.

Finally it has taught us a valuable lifelong lesson about the improvements and working and interacting in a group.

### Existing System and need for the system:

In existing system all the test reports are on paper and Reports was created by manually so it takes time to create reports.

Also, User needs to go to lab and test and then they were giving test. But by using this application. User can easily book appointment.

Employee are going to their respective address and collects the sample. Users are getting final reports online so no need to go any lab to book appointment to give samples to collects the reports.

So automatically it saves time

## ACKNOWLEDGEMENT

**We take this opportunity to present the project documentation on**  
**" online food ordering website "**

We would wish to thank all the people who have helped to make this project possible. A project for a student is an experience , in the course of which he/she realizes the real world problems that one has to undergo during the development of any project. Hence without the help and guidance of our teachers, this project wouldn't have been successful. We are grateful to them for supporting us throughout the Design, Implementation and Evaluation phase of the project.

We are thankful to Prof. Rajeshri Gaikwad for giving us their valuable time and also for guiding through the stages of the project and also being such a supportive project guide.

We also sincerely acknowledge the help of the entire staff of the Bachelors in Computers Application Department and our classmates whose Co-operati has made our project a success.

**"THANK YOU!"**

**ANKIT SINGH**

## LIMITATION:-

- Therefore, conclusion of the proposed system is based on user's need and is user centred. The system is developed in considering all issues related to all user which are included in this system. Wide range of people can use this if they know how to operate android smart phone. Various issues related to Mess/Tiffin Service will be solved by providing them a full-fledged system. Thus, implementation of Online Food Ordering system is done to help and solve one of the important problems of people. Based on the result of this research, it can be concluded: It helps customer in making order easily; It gives information needed in making order to customer. The Food website application made for restaurant and mess can help restaurant and mess in receiving orders and modifying its data and it is also made for admin so that it helps admin in controlling all the Food system. With online food ordering system, a restaurant and mess menu online can be set up and the customers can easily place order. Also, with a food menu online, tracking the orders is done easily, it maintain customer's database and improve the food delivery service. The restaurants and mess can even customize online restaurant menu and upload images easily. Having a restaurant menu on internet, potential customers can easily access it and place order at their convenience. Thus, an automated food ordering system is presented with features of feedback and wireless communication. The proposed system would attract customers and adds to the efficiency of maintaining the restaurant and mess ordering and billing sections. Scope of the proposed system is justifiable because in large amount peoples are shifting to different cities so wide range of people can make a use of proposed system

### Future Enhancement:-

- Live Chat Support: Implement a live chat support feature to help customers with any questions or issues they may encounter during the ordering process
  
- Personalized Recommendations: Consider incorporating artificial intelligence (AI) algorithms to suggest food items based on the customer's past orders and search history.

**OM SHELKE**

**&**

**VISHNU PAWAR**

### **BENEFITS:-**

- Reduce efficiency and increase goodwill Give desired and occurrence results.
- Reduce drawbacks of manual working increase profitability.
- Secure provide data/results from unauthorized person.
- Hence, the computerization of the system is necessary which produces results more correctly and in short time. This product supports security to entire system to keep it away from unauthorized us

### **LIMITATION:-**

- This software is used only for admin and registered products and customers who are given the system by the admin.
- Any external person is not handling this software without any guidance.
- This software cannot calculate profits and losses of the company
- There is nothing perfect in the world, so this software is not an exception

### Future Enhancement:-

There can be following enhancements to be done for the Product to be more user –friendly & optimized for the user needs .

- The Employee module is to be developed to maintain the information related to employees .
- The modules for maintaining the information about products , bills, purchases, payroll of employees , suppliers can be developed so that the system can be used for retail shops.
- The facility of saving the search reports is to be provided

## CONCLUSION

Student information management system lead to a better organization structure since the information management of the students is well structured and also lead to better as well as efficient utilization of resources. Student Information Management System can be used by education institutes to maintain the records of students easily. Achieving this objective is difficult using a manual system as the information is scattered, can be redundant and collecting relevant information may be very time consuming. All these problems are solved using this project our project Student Information Management System was developed by all two of us. We, a team of two persons took a step by step approach in order to reach our goal. We applied the knowledge we gained. And developed this project "STUDENT INFORMATION MANAGEMENT SYSTEM".

## MARKS MANAGEMENT MODULE

- . In this module Administrator register all subjects and also provide subject code to each and every subject.
- . Assign subjects to every branch in semester wise.
- . Using subject code Administrator edit and delete the subjects.
- . Administrator enters marks of the Student in semester wise.
- . Administrator can also edit and delete the marks of the student.

## SCOPE OF THE PROJECT

- ☐ The Student Information Management System (SIMS) can be enhanced to include some other functionality like marks, attendance management.
- ☐ Talent management of students based on their performance evaluation can be added.
- ☐ Social networking can also be added wherein students can interact with each other.
- ☐ Online class functionality can be added.
- ☐ Can evolve as an online institution.
- ☐ Functionality of chat and messages can be added.
- ☐ Online exam functionality can be added.
- ☐ Online resume builder functionality can also be added.
